EUROPOLTECH OVERVIEW

PIAP unveiled its latest generation of TRM tactical throw-bot UGV. Being considered for a Europoltech Innovation Award, it has a host of new, unique throw-bot innovations: silent motor, lighter, smaller control panel, ability to control three PIAP throw-bots at once, increased camera and lights, and - this is cool - a flash-bang grenade "Launcher." OK, it silently deploys the FBG in the opponents vicinity, rolls back 50cm, and - FLASH-BANG! - the FBG goes off without damaging the throw-bot unit. Also new at PIAP are increased CBRN functionality of its popular UGV. Popular throughout Asia, PIAP is expanding its export focus into Latin America (new partner in Chile to be announced) and Africa (much interest in key hot-spots, such as Nigeria).

PIAP's award-winning next generation throw-bot, shown with its new control pad, which can operate three throw-bots and deploy flash-bang grenades.
